

Organised by CEDIA, the Custom Electronic Design and Installation Association, the Home Technology Event is the only dedicated product and training event for smart home innovations. The trade event showcases an ever growing portfolio of products and services for designers, installers, integrators and specifiers of electronic systems in the home.

Featuring the latest innovations and technologies in home cinema, audio-video solutions, lighting control, structured wiring, HVAC control, blind and security systems plus the most diverse education and conference programme the industry has to offer.

If you are involved in the planning, design, specification or installation of home electronic systems, this is a must attend event for your calendar.

There are a host of FREE seminars, demonstrations and latest products on view and many training courses at a small extra charge (must be pre-booked). A free programme can be downloaded from the CEDIA website.

This year ECA ITEC will have a stand at the exhibition and they will be launching their new ITEC Publication 'An Introduction to 3D Audio visual Systems', which is a must for contractors and home owners who are interested in the latest technology to hit the home and commercial audio visual market.

The ITEC team will be on hand to speak about a range of new technology and to tell you more about the ECA and membership. So if you are interested in joining the ECA, already a member and want to join ITEC or just want to know more about 3D and other new technologies, come and join us on stand number C3a.

The event is on 15th to 17th June in London at the London Dockland's Excel Centre and entry is free to those who pre-register at
